

Questions on Stored Procedures

- 1 Write a stored procedure `sp_GetCustomerOrders` that accepts a `@CustomerID` and returns all their orders.
- 2 Create a stored procedure to insert a new record into the Customers table.
- 3 Create a stored procedure `sp_GetSalesByCategory` that accepts a `@Category` parameter and returns total sales and profit.
- 4 Create a stored procedure `sp_GetSalesByDateRange` that accepts `@StartDate` and `@EndDate` and returns sales in that range.
- 5 Write a stored procedure that updates a customer's segment based on total sales (>10000 = "Corporate", else "Consumer").
- 6 Create a stored procedure that deletes all orders older than a given year (with confirmation).
- 7 Create a stored procedure `sp_GetTopNProducts` that accepts `@N` and returns top N products by profit.
- 8 Create a stored procedure that returns **total number of orders per region** using a GROUP BY.
- 9 Create a stored procedure to find **low-profit customers** ($\text{Profit} < 0$).
- 10 Create a stored procedure `sp_CategorySummary` to return sales, quantity, and profit summary for all categories.
